REPORT FROM THE CHAIRMAN OF THE BOARD

Last year I reported to you that a committee was to be appointed to conduct a study to determine the role of Regional Boards of Health in providing health services in Saskatchewan.

The committee has met several times and has made recommendations to the Minister, in part, that a new role be developed for regional boards of health in order to rejuvinate these bodies. Educating district health councillors and board members is seen as crucial to increasing our effectiveness and one of the purposes of this meeting today is to serve as a seminar for those present.

The common denominator of all regional boards of health are the same so it follows that a meeting of such boards with the Minister of Health would be a sounding board for ideas and the feasibility of future programs and a very necessary exercise which we firmly endorse.

This year the Minister of Health has organized a study group on services for seniors. The Minister is hoping to receive input from our board and from other interested parties and organizations on: (1) how adequate are the present range of community services for non-institutionalized elderly, (2) who should be providing these community services, (3) what mechanisms are needed to link and co-ordinate newly recommended services with existing services to the elderly.

We will appreciate your ideas and recommendations on each of these subjects.

Mr. Ian Stockan

REPORT OF THE DIRECTOR AND MEDICAL HEALTH OFFICER

The Saskatoon Rural Health Region has had a busy year. Changes in our health care delivery system have kept us active and forward-looking.

The most distressing event was the untimely death of Dr. Marvin Klepsch. Marvin was a gentleman and truly professional colleague. His love of his rural patients endeared them to him and they returned that affection. To work with Marvin was a pleasure and his memory will encourage us all to be more devoted to those for whom we have a responsibility.

Staff

I am happy to relate that we now have a complete complement of public health inspectors (though not in 1984, the year under review). Our staff of public health nurses has been kept stable and complete. We were pleased to receive the services of a half-time nutritionist for a few months - we had hoped it could have been longer.

Health Region Activities

The opening of our Chiropody Clinic in January 1985 was certainly a milestone. Dr. P. Reilly and Dr. E. Hauck have been kept busy from the first day. We have a well-equipped chiropody clinic and excellent staff. We look forward to the continued growth of this service.

Health education continues to be an important part of our activities. Our public health nurses have held clases in child development for parents, together with the psychologist and speech pathologists. We have taken part in health promotion fairs and similar expositions. Our inspectors continue to hold food-handler seminars. The public is more health-conscious these days, and we feel that we should offer our services to further this educational process.

Prenatal classes are well attended, and more fathers are now coming - we encourage this.

Services to the pre-school child have become very important to us during the recent year. We are now offering a very sophisticated and all-embracing examination in an endeavour to screen these children for a multi-faceted and broader aspect of child-health. Our staff will now screen such children for a wider range of defects and also in more depth. This will entail much extra activity in child health clinics and may result in requests for extra nursing staff. We look forward to the challenge this development has to offer.

Communicable Disease

Traditionally, public health departments have been concerned with

communicable disease. This concern is, perhaps, our most important interest. Our immunization program reflects this concern and is one of our most successful programs. Such diseases as poliomyelitis, and diphtheria are almost unknown - as is measles today.

We are worried about the incidence of gasto-intestinal diseae (dysentery, etc.). We are pleased that we have had few food poisoning cases this year and hope that continued health education will keep this under control.

Hepatitis A is still a worry, but we are reporting more hepatitis B, as is the rest of Canada.

There were very few cases of influenza last winter - I trust this decline will continue this coming season.

Duties in Other Regions

The medical health officer continues to give his services to the Prince Albert Region. He no longer acts as medical health officer to Rosetown Region.

Vital Statistics

The health of a community can be judged by its vital statistics. This data refers to such important facts as numbers of deaths, births, infant deaths, etc. These may make dull reading, but can be most revealing.

Whilst we have only a small population base to study, nevertheless we can claim that our community is a healthy one in which to live and bring up our families. A study of the vital statistics tables will show that we live in a well serviced and healthy community.

I have appreciated working with Mr. Ian Stockan and the Board of Health. I thank them for their support and encouragement. The staff of the region has been most loyal and efficient and it has been a pleasure to associate with them.

We look forward to this continued association.

Dr. H. L. Kirman
Regional Director & Medical Health Officer

PUBLIC HEALTH NURSING

In the past year our health region had a complete staff component of nurses to carry out the public health nursing program.

We held child health centres in the 32 established areas. Immunization, health assessment, counselling and referral initiation was offered to the attenders. Appropriate immunization has been received by the majority of the population. The remaining sector was seen by private physicians and the family practice unit at University Hospital.

Our home visits showed an increase over last year. These would include those people seen as prenatals, postnatals, followed up as referrals, communicable disease follow-up and SAIL program clients. Many people found they were able to remain at home and avoided frequent hospitalization due to the relief they received through the use of respiratory equipment. We have 120 clients in our region who have this type of equipment in their homes. The home placement of such equipment, the procedure as to its use, care and safety is introduced to the client by the public health nurse.

The school program offered immunization health screening and health teaching to the student population. The Breast Self-Examination (BSE) program for the grade twelve young ladies was very well received. All of the schools in our region took advantage of the BSE presentation this year. Other presentations in the school covered the areas of family life, growth and development and personal hygiene.

Prenatal classes were held throughout the entire year. The attendance showed a notable increase over the previous year. The first time parents comprised 26 percent of the total class attenders. Client evaluations showed over all appreciation and that the classes were meeting the needs for this sector of the population.

Other community presentations addressed the preschool child and his or her growth and development for parents who were interested in establishing play schools or who had children entering kindergarten. Nurses participated as class presenters in the approved baby sitting courses in the area of child care and safety. In one area a ladies service club asked for a BSE presentation for its members.

Staff input has been received and submitted for the new preschool core programs. Planning and phasing in the program for three- and four-year old children will be looking for more child health centre time and accommodation. Any help that the community may offer in regard to obtaining this aim will be greatly appreciated.

Student field experience was offered to 67 students from the Kelsey Nursing Program and the University College of Nursing. This included observation and participation at the child health centres, home visits and school visits.

At this time I wish to extend my thanks and appreciation to Dr. Kinman, Director and Medical Health Officer, the nursing staff, our professional colleagues within our Region as well as the members of the Regional Board and all the health region representatives for their support and co-operation in the year now concluded.

Elizabeth Drabinasty
Acting Regional Nursing Supervisor

SPEECH/LANGUAGE PATHOLOGISTS' REPORT

During 1984, the Speech/Language Pathologists of the Saskatoon Rural Health Region continued to provide both direct and indirect services to young children and adults with communication disorders.

Direct services were provided through weekly clinics held in Lanigan and Humboldt by Miss Slegel and in Watrous and Davidson by Miss Kells. Clinics were also held weekly in the Saskatoon office by both SLPs. During these clinics, clients were seen for evaluation of their speech and language skills, for direct help with their communication handicaps, or were supplied with programs for parents to review at home with the children.

Another important component of the Speech/Language Pathology program is consultation with other professional workers both in our office and in other agencies. During 1984, visits were made to schools, homes, a developmental centre, and other treatment agencies to discuss programs for individual clients or to facilitate a smooth transfer for children from one service agency to another. Presentations on speech and language skills were made to public health nurses, to a local preschool for children with special needs, and at a Parent Involvement Workshop sponsored by the Council for Exceptional Children.

Several developments in Speech/Language Pathology services in Community Health Services Branch during 1984 are noteworthy. Preliminary work was done on the development of a speech and language component of a Preschool Core Screening program. Miss Slegel worked on the committee along with Orlene Martens, SLP from Lloydminster (Chair); Delores Ast, RNS from Swift Current; Diane Johnson, Nursing Consultant; and Brenda Righetti, Director of SLP, until her resignation in June of 1984. This committee examined options for speech and language screening programs and identified a target group and a tool for screening. The development of this screening program reflects our Branch's philosophy of early identification and intervention with children having potentially handicapping conditions.

In March of 1984, a new statistical reporting system was implemented which allows us to better measure our contact with clients and the provision of both direct and in-direct services.

PUBLIC HEALTH INSPECTION

Staffing

We were pleased to obtain the services of Bill Wright to fill the PHI II vacancy. Bill was formerly PHI I at Wynyard. With this appointment, a full complement of inspectors was attained which consists of two PHI I positions, the PHI II and a half-time Senior PHI, shared with the Prince Albert Health Region.

Gerry Parenteau, who became quite well known throughout the north and west portions of the region during his brief stint as temporary staff, accepted a permanent position with Health and Welfare Canada, Medical Services Division, Prince Albert.

Statistical

Our statistical reporting system indicates an increase in office and administration related activities. This reflects the initial emphasis placed on revamping the organizational and administrative aspects since October 1984. These we felt were critical in order to provide a more comprehensive and accountable service. Decisions on the major changes have been made. Implementation is under way.

General

The benefits of reorganization are becoming evident. However, we anticipate that it will take the balance of 1985 and most of 1986 for the full effects to be achieved. Our objective for 1986 is for our field services to recover to the level provided prior to the extended period of the staff vacancies. Post 1986, the goal is to provide a more consistent and frequent "field" presence, contacts and services.

There are some encouraging signs that long efforts aimed at provincial regulation revision/deregulation will occur in 1986.

Our staff has expressed appreciation for the co-operation, assistance and support that they have received from all quarters of the communities in which they work.

C. W. Caswell
Senior Public Health Inspector

EARLY CHILDHOOD PSYCHOLOGY REPORT

It is with deep regret that we must write this report and that Dr. Marvin Klepsch was not able to do so himself.

The duties of the early childhood psychologist have taken him to Rosetown Health Region. He has spent approximately 40% of his time there, the rest in Saskatoon Rural Health Region.

Dr. Klepsch spent much time on various committees, both provincial and local. His expertise was called for by the Department, but also by local committees and agencies. He was busy with Regional Early Childhood Committees and other agencies working with small children and those showing delayed development. He was used extensively in in-service educational services and community workshops. He spent time organizing Early Childhood Intervention Programs.

In spite of all these activities, Dr. Klepsch found time to engage in casework, as the statistial report will reveal. These cases involved such diverse problems as behavioral and emotional problems, delayed developments, etc. He worked in close association with public health nurses and speech/language pathologists.

Dr. Klepsch will be remembered for his dedication to the cause of small children. I am proud to have worked with him.

Dr. H. L. Kinman
Regional Director & Medical Health Officer

CHIROPODY PROGRAM

Since the inception of the Saskatoon Chiropody Clinic into the Provincial Program there has been a tremendous response by the general practitioners, public health nurses, nursing homes, home care and the general public. The referrals are daily covering our desks and the current available time for an appointment is approximately 6 to 8 weeks. Up to September 30, 1985, there has been a total of 6,244 patient visits in our office. This includes the 1,893 new patients.

April 1, 1985, brought us our ever so efficient receptionist, Edna Birnie. Unfortunately she is only part-time where a much needed full time position is necessary. In her absence our nurses, Dorothy Gamble and Maureen Frank, are encumbered with all reception duties as well as the duties of Chiropody Assistant. This is a very strained position to be in when you are expected to be in two places at once. A full time receptionist position is a much needed commodity in this office. Productivity is at its optimum when fully staffed.

Dr. T. P. Reilly, D.S.C. Dr. E. W. Hauck, S.R.Ch.
